

Dear Member of Congress:

We, the people, have a very important message for you:

Having trouble reading this message? Can't scan it? Then maybe you shouldn't force consumers to scan QR codes or call 1-800 numbers to read the ingredients in our foods.

Vote no on the Stabenow - Roberts DARK Act (S. 764).

Sincerely,
A concerned constituent

Instead of providing consumers with simple, on-package labeling of genetically engineered foods, the Stabenow-Roberts bill:

- ✓ **Has no mandatory standards.** The Senate bill itself proscribes no mandatory standards for GMO labeling.
- ✓ **Means a vast number of current and future ge foods will be exempt from any labeling.** According to an FDA critique of the bill, the definition of “bioengineering” under the Act would exclude from labeling a vast number of current foods produced with genetic engineering.
- ✓ **Discriminates against the rural, low income, and the elderly.** The bill anticipates that GMO labeling will be done primarily through QR codes (“digital” labeling). Because of their lack of access to smart phones, more than 50% of rural and low income populations, and more that 65% of the elderly, will have no access to these labels. This impact will fall disproportionately on minority communities.
- ✓ **Has no enforcement against those who violate mandatory gmo labeling.**
